DSS: Yes

I agree with you and actually Steve I think tried to call me-now I what about. This is a good marker for atherosclerosis and should be done if at all possible.

Subject FW: Fw:EBI

Dear George,

our telecon on Friday will have a couple of issues concerning the Early Biomarkers of Inflammation Study (EBI) one of which is the concern that the study as designed right now shall be overloaded by c-IMT and color-coded Doppler, i.e., that the ultrasound exams will threaten the quality of the lab data, according to some of the important people at PM. What is your honest opinion? Will the outcome be worth the effort? As a cardiologist I am convinced of the benefit of both of the exams especially in the light of the fact that Steve Feinstein will perform the analyses. The alternative would be running the c-IMT and Echo trials separately without the extensive phenotyping of the present trial. For your convenience I added the time schedule and two Powerpoint slides which were sent to you already.

Kind regards,

Martin

NB I also informed Steve about these PM concerns.

Subject: Fwd: Fw: Meyer CV

Dear Martin,

I spoke with Pete Meyer this morning. He will be looking for your E-mail. I am sending to you a copy of his resume for your review,

Best wishes,

Steve

PS I am curious regarding your new concept...
